MESSAGE

The Department of Chemicals and Petrochemicals is actively working for promotion of the Chemical and Petrochemical sector in the country. The share of this sector in manufacturing is quite significant and therefore its contribution to development of the National Economy is very important. Since this sector has numerous forward and backward linkages, it is called the backbone of the industrial sector of the country, by providing building blocks for many downstream industries. It has also significant role in agricultural development of the country, in terms of fertilizers, agro-chemicals, irrigation etc.

2. I am very happy to note that the Department of Chemicals & Petrochemicals is bringing out the Annual Statistical Publication "Chemical & Petrochemical Statistics at a Glance-2018".

3. I appreciate the excellent work done by the officers of the Department of Chemicals & Petrochemicals in this regard.

My best wishes to all concerned.

Chemical and Petrochemical sector is one of the pioneering sectors having bearing on day to day needs of the society. Presence of Chemicals and Petrochemicals can be seen in everyday life of the people at large. Chemical Industry contribute significantly for the economic development and growth of various key Sectors in the country such as automotive, construction, electronics, health care, textiles and FMCG. Government initiatives such as Make in India, Skill India, Digital India, Swatch Bharat Abhiyan etc. will accelerate growth of Chemical Industry. The share of Gross Value Added (GVA) of this sector in GVA of Manufacturing Sector is about **7.99%** while it is **1.34%** in National GVA¹. Output from Chemical Sector has grown with CAGR of 5.65% while output for Manufacturing Sector has grown at 5.3% CAGR during the period 2011-12 to 2016-17 (Table 48). GVA of Chemical Sector has grown with 5.38% CAGR while GVA of Manufacturing Sector has grown with CAGR of 7.8% during the period 2011-12 to 2016-17 (Table 46).

2. The Statistics and Monitoring (S&M) Division of the Department compiles statistics of selected Major Chemicals and Petrochemicals from Large and Medium Scale units supplying monthly data on production and installed capacity. S&M Division also derives estimates of consumption with the help of production and foreign trade data. The data in respect of Export and Import of Chemicals and

Petrochemical items monitored by DCPC is from the statistics compiled by DGCIS under the Ministry of Commerce and Industry.

3. The publication has seven chapters, namely, Chapter 1: An overview of Chemical and Petrochemical Sector; Chapter 2: Global Scenario; Chapter 3: Important Economic Indicators; Chapter 4: India Trade classification (Harmonized System) [ITC(HS)]-2017 - An Abstract; Chapter 5: National Industrial Classification (NIC)- A Digest; Chapter 6: Indices released by Government of India; Chapter 7: Glimpses of Important Trends during 2013-14 to 2017-18.

Chapter 1 besides defining Basic Chemicals, Specialty Chemicals & Agrochemicals, also presents the latest status of Chemical Sector in India. Chapter 2 presents the status of Indian Chemical Sector vis-a-vis other countries of the world. Chapter 3 provides important statistics like GVA, Index of Industrial production, Export and Import of Chemical sector. Chapter 6 describes important indices like Index of Industrial Production (IIP), Consumer Price Index (CPI) & Whole Sale Price Index (WPI). Chapter 7 provides graphical presentation of trends for the period 2013-14 to 2017-18 in Production, Installed Capacity, Import and Export for various groups under Major Chemical and Major Petrochemical along with brief analysis. At the end in the Appendices Section, Statistical tables presenting information inter-alia on Production, Installed Capacity, Capacity Utilization, Imports/ Exports along with their growth rates during 2010-11 to 2017-18 have also been provided. Detailed table on Foreign Trade, FDI, IIP, WPI etc. related to Chemical and Petrochemical Sector have also been included in the Appendices Section.

4. The production of Selected Major Chemicals (Group-wise) and selected Major Petrochemicals (Group-wise) is generally found to be growing consistently

over the years. The annual growth during 2017-18 over preceding year is 8.14% with CAGR of 2.80 % over a period of 8 years, in case of Major Chemicals. The annual growth of Basic Major Petrochemicals is 1.01% over preceding year with CAGR of 3.95% during the same period. The CAGR is higher in production of Basic Major Petrochemicals as compared to CAGR in production of Major Chemicals.

5. Installed Capacity utilization in case of basic Major Chemicals is 79 % (2017-18) while it is 85% in case of Basic Major Petrochemicals. The utilization of installed capacity is in the range of 80% - 82% for **Major Chemicals** like **Alkali** and **Inorganic Chemicals**, whereas it is in the **range of 63- 71%** in case of **Organic Chemicals, Pesticides (Technical Grade)** and **Dyes and Pigments (2017-18)**. Micro study of the sector indicates huge unutilized installed capacity in case of **Organic Chemicals (29%), Pesticides (Technical Grade) (35%), Synthetic Rubber (28%), Dyes and Pigments (24%)** and **Performance Plastics (29%)**.

6. Among **Selected Major Chemicals** (Group-wise), for **Inorganic Chemicals** and **Organic Chemicals** there is a substantial import into the country. About 48 % of Domestic demand for **Inorganic Chemicals** is met through import while it is 68% in case of **Organic Chemicals** (*Table 1*) . Amongst **Inorganic Chemicals**, two products, namely, **Carbon Black** (Rs.1436 crore) and Calcium **Carbonate** (Rs.645 crore) have imports of more than Rs. 500 crores. (*Table 17*). Amongst **Organic Chemicals**, five products, namely, **Acetic Acid** (Rs.2906 crore), **Acetone** (Rs.749 crore), **Phenol** (Rs.2028 crore), **Methanol** (Rs.4000 crore) and **Aniline** (Rs.589 crore) have more than Rs. 500 crore of imports into the country (*Table 17*).

7. Amongst **Selected Basic Major Petrochemicals** (Group-wise) for **Polymers, Synthetic Rubber and Synthetic Detergent Intermediate**, there is a substantial import into the country. About 37% of domestic demand for **Polymers** is met

through import while it is as high as 70% in case of **Synthetic Rubber**. In case of **Synthetic Detergent Intermediate**, about 22% of domestic demand is met through imports (*Table 6*). Amongst **Polymers**, three products, namely, **High Density Polyethylene** (Rs. 8406 crore), **Polypropylene** (Rs. 7620 crore) and **Poly Vinyl Chloride** (Rs. 11237 crore) have import of more than Rs. 5000 crore (*Table 25*). Amongst **Synthetic Rubber**, four products, namely, **Styrene Butadiene Rubber** (SBR) (Rs. 1613 crore), Poly **Butadiene Rubber** (Rs. 1226 crore), **Ethyl Vinyl Acetate** (Rs. 1845 crore), and **Poly Rubber** (Rs. 1510 crore) which have import of more than Rs. 1000 crore into the country (*Table 25*). Amongst **Synthetic Detergent Intermediates**, one product, namely, **Linear Alkyl Benzene** (Rs. 1637 crore) has import of more than Rs. 1000 crore into the country (*Table 25*). Amongst Selected Basic Major Petrochemicals (Group – wise), in case of **Performance Plastics**, **major** portion of domestic production is exported (about 61% of domestic production) (*Table 6*). Amongst **Performance Plastics**, there is one product, namely, **PET chips (Polyester Chips)** (Rs. 6553 crore) has a export of more than Rs. 5000 crore. (*Table 24*)

8. The trade deficit during 2017-18 (i.e. net import) in Chemicals and Petrochemicals Sector (comprising chapters 28, 29, 32,38,39,4002,54 and 55 of HS code) is Rs. 98,653 Crore as per figures available on DGCIS portal, as on 31.07.2018 (*Table 12 A*). The trade deficit in respect of selected Major Chemicals and Petrochemical Products, being monitored by DCPC & which are basically intermediate in nature, is around Rs. 37,326 Crore as per figures derived from the data received from DGCIS, Kolkata. (*Tables 15 & 23*).

9. In respect of Major Chemicals at group level, it is observed , on the basis of products monitored by this Department that Alkali Chemicals, Organic Chemicals and Inorganic Chemicals are **trade deficit**, whereas Pesticides (Technical Grade and

formulation both); and Dyes & Pigments are **trade surplus**, during 2017-18 (*Table 18*). However, in respect of Major Petrochemicals at group level Polymers, Fiber Intermediates, Synthetic rubber, Synthetic Detergent Intermediates and Other Petro-based Chemicals are **trade deficit**, whereas Synthetic Fibre, Performance Plastics, Aromatics and Olefins are **trade surplus** during the same period (*Table 26*). This aggregates to overall **trade surplus** in Major Chemicals and overall **trade deficit** in Major Petrochemicals resulting in to **net trade deficit** for Chemicals and Petrochemicals sector.

Chapter 1

An Overview of Chemical and Petrochemical Sector

The chemical industry is the main stay of industrial and agricultural development of the country and provides building blocks for several downstream industries, such as textiles, papers, paints, soaps, detergents, pharmaceuticals, varnish etc. It is one of the most diversified of all industrial sectors covering thousands of commercial products. Petrochemicals constitute a very important segment of world chemicals market, with a share of nearly 40 per cent. The industry is important as it has several linkages with other sectors of an economy. Petrochemicals have backward linkages with other industries in petroleum refining, natural gas processing and forward linkages with industries that deal in a variety of downstream products. Also, the industry offers alternatives, which serve as substitutes for natural products and hence, has the capacity to meet the constantly growing demand that would otherwise strain the natural resources. The value additions in the petrochemicals chain offer immense possibilities and cater to the need of textiles and clothing, agriculture, packaging, infrastructure, healthcare, furniture, automobiles, information technology, power, electronics and telecommunication, irrigation, drinking water, construction needs and host of other articles of daily and specialized usage, amidst other emerging areas.

2. In Chemicals sector, 100% FDI is permissible under the automatic route, through the RBI. Manufacture of most chemical products, inter-alia, covering organic / inorganic, dyestuffs & pesticides, is de-licenced. The entrepreneurs need to submit only Industries Entrepreneur Memorandum (IEM) with the Department of Industrial Policy & Promotion provided location of the project falls outside standard urban area limits of metropolitan cities and municipal cities. Only the following items are covered in the compulsory licencing list because of their hazardous nature as required by international conventions.

- Hydrocyanic acid & its derivatives
- Phosgene & its derivatives
- Isocyanates & di-isocyanates of hydrocarbons.

3. Chemicals can be broadly divided into the following sub-groups:-

i. Basic Chemicals

Chemicals, such as organic and inorganic chemicals, bulk petrochemicals, other chemical intermediates, plastic resins, synthetic rubber, man-made fibres, dyes and pigments, printing inks, are basic chemicals. These are also known as commodity chemicals.

ii. Specialty Chemicals

Specialty Chemicals, also known as performance chemicals, are low-volume but high-value compounds. These chemicals are derived from basic chemicals and are sold on the basis of their functions. For example, paints, adhesives, electronic chemicals, water management chemicals,

oilfield chemicals, flavours and fragrances, rubber additives, paper additives, industrial cleaners and fine chemicals, sealants, coatings, catalysts etc. come under this category.

iii. Pesticides

Chemicals which essentially are meant for protecting agriculture crops against insects and pests are covered under this sub-group. Fertilizers and Pesticides played an important role in the "Green Revolution, during the 1960s and 1970s. Indian exports of agrochemicals have shown an impressive growth over the last five years. There are many pesticide formulators spread over the country and India is the 4th largest producer of agrochemicals after USA, Japan and China. This industry is net export earning & contributes significantly to the foreign exchange basket of the country.

4. Based on composition, building blocks for petrochemicals are divided into two sub-groups:-

i. Olefins:

Olefin, also called as alkenes contains one or more pairs of carbon atoms linked by a double bond. Examples include ethylene, propylene and butadiene. Both ethylene and propylene are used in the industrial production of chemicals, plastics and plastics products while butadiene is used in the industrial production of synthetic rubber.

ii. Aromatics:

Aromatics are hydrocarbons derived from petroleum, characterized by a ring-like molecular structure. Examples include benzene, toluene, and xylene. Benzene is used in making dyes as well as in making synthetic detergents. A combination of benzene and toluene are used in making isocyanates which are required in making polyurethanes while xylenes are used in the industrial production of both plastics and synthetic fibres.

5. Growth Drivers for the Chemical Sector:

- A large population, huge domestic market, dependence on agriculture and strong export demand are the key growth drivers for the industry.
- A global shift towards Asia as the World's chemicals manufacturing hub.
- Per capita consumption of chemicals in India is lower , compared to western countries, so immense scope for new investments.
- Rise in GDP and purchasing power generates huge growth potential for the domestic market.
- A focus on new segments such as specialty and knowledge chemicals.
- Skilled science professionals.
- World-class engineering and strong R&D capabilities.

6. **Research & Development (R&D)**

The Chemical sector is highly heterogeneous encompassing many segments like organic, in-organics, dyestuffs, pesticides, paints, soaps and petrochemicals etc. Research and Development is critical and of paramount importance for the growth and development of this sector. Continued R&D efforts in the part of the industry helps to improve their quality standards, obtain higher yields resulting in reduction in cost of production and to earn competitive edge in the International Market. Indian Chemical Industry spends on R&D to the extent of 2-3% of their total turnover, as against 9-10% by the multi-national companies in overseas countries. The industry would, therefore, have to make large investments in R&D to successfully counter competition from the international chemicals industry. India has a number of scientific institutions and the country's strength lies in its large pool of highly trained scientific manpower. With the introduction of the Patent Act 2005, product innovation has assumed high importance.

7. **Foreign Technology Agreements**

Foreign Technology Agreements in India cater to the growth of the technology in the Indian industries. The foreign technology is transferred from foreign sources such as research and development agencies, foreign parent companies and other manufacturers to the Indian counterparts. The transfer of foreign technology takes place by the means of foreign direct investments and foreign technology collaboration agreements. Foreign Technology Agreements in India permit transfer of technology by the means of Government approval or through the automatic route delegated by the RBI.

8. The Chemical and Petrochemical Industries occupies a pivotal position in meeting some basic human needs and in improving the quality of life. It is extremely important to the economy and is an integral part of everyday life. India has a high population base and thus, faces formidable problems in providing sufficient food, medicines and adequate shelter. From a very modest level of 52 million MT in 1951-52, food grain production increased to about 284.83 million MT in 2017-18 (as per 4th Advance Estimates of 2017-18). The chemical industry provides the vital inputs required, chemical fertilizers and pesticides, to augment food production and save crops from attack by a variety of pests in a safe and selective way. The marked improvements in the average life expectancy of our countrymen can be at-least partially attributed to the Chemical Industry which has provided lifesaving drugs and other chemicals required for managing public health care. The problem of housing can be tackled effectively with the assistance of the Chemicals Industry. It plays a crucial role in housing development.

9. The Chemical Industry converts raw materials like water, salt, crude oil, natural gas, air, metals minerals, etc into other valuable products. It is involved in almost every industrial process and therefore plays a significant role in economic and social development. Without Chemical Industry, there would be no electronics or microelectronics, refrigerators, recording tapes,

automobiles, laser discs, super magnets, processed foods and virtually all consumer products etc. Even the power industry depends on the Chemical Industry for its operations. The use of chemicals (ion exchange resins) becomes indispensable for removing dissolved salts needs in boilers and other applications. In gold mining, cyanide solution is used for extracting gold. The crude oil refining process uses chemicals, catalysts, heat, and pressure to separate and combine the basic types of hydrocarbon molecules naturally found in crude oil into groups of similar molecules. Apart from providing a variety of drugs for alleviation of human sufferings, the chemical industry provides safe anesthetic agents and high quality artificial aids including a hip joint made from ultra-low molecular weight polyethylene. Other health products including dental fills, contact lenses and dialyses also depend on the Chemicals Industry.

10. Some of the most useful materials, synthetic polymers, also known as plastics, have transformed our lives in the last few decades. The driving force for this development was provided by the need for conservation of natural resources and energy efficiency and inherent advantages of the material which created possibilities of innovative designs and cost savings. Its usefulness, adaptability and flexibility of usage have led to a shift in manufacturing from the conventional material based products to synthetic products. The production of polymers has increased from 6.3 million tonne in 2010-11 to 9.28 million tonne in 2017-18 (CAGR of 5.58%) while its consumption has increased from 8.02 million tonne to 12.83 million tonne (CAGR of 8.46%).

11. Chemicals from petroleum may range from basic petrochemicals such as ethylene, propylene, benzene, xylenes to finished end-products like plastics, rubbers, fibers, detergents, pesticides, dyes etc. These may be classified as (a) first generation, (b) second generation and (c) third generation petrochemicals. First generation petrochemicals are chemicals directly available from basic inputs such as petroleum crude oil or natural gas, either by fractionation, isomerization, cracking etc. These can also be derived from coal gasification and bio mass. These generally represent the basic petrochemicals, which are the building blocks for various chemical syntheses. Examples of this class of chemicals are methane, ethane, propane, ethylene, propylene, toluene, xylenes etc. Second generation petrochemicals are the derivatives of the first generation petrochemicals. Example of such products are styrene (derived from benzene and ethylene), dimethyl terephthalate or terephthalic acid (derived from p-xylene), acrylonitrile (derived from propylene), ethylene glycol (derived from ethylene), vinyl chloride monomer (derived from acetylene or ethylene) etc. Second generation petrochemicals constitute the intermediate chemicals which serve as the raw materials for consumer industries like plastics, rubbers, fibres, dyes, detergents etc. Third Generation Petrochemicals are the consumer commodities derived generally from second generation petrochemicals and represent the most important commercial products such as plastics, rubbers, fibres, detergents etc. Examples are polystyrene (from vinyl chloride monomer), DDT from (chlorobenzene), azo dyes (from styrene), Polyvinyl chloride (from aniline) etc. However, some of the products may be directly synthesized from first generation petrochemicals. Polybutadiene rubber, for instance, is obtained by polymerizing butadiene. Since

most of the plastics or rubbers are derived from second generation petrochemicals, polybutadiene rubber is regarded as a third generation petrochemical.¹

12. Chemical sector is predominantly based on feedstock derived from crude oil, natural gas, salt and minerals. Naphtha (used for production of Urea, Aromatics and Olefins), Heavy Gas oil (propylene and ethylene) and Kerosene (Linear Alkyl Benzene) are derived from crude oil. Steam cracking/ Catalytic Reforming of low and high aromatic naphtha in oil refineries provide Olefins (Ethylene, Propylene and Butadiene) and Aromatics (benzene, toluene and xylenes). Natural gas contains Methane (CH₄), Ethane (C₂H₆), Propane (C₃H₈) and Butane (C₄H₁₀). Rich natural gas, which contains C₂ and C₃ in extractable quantity, is used in producing Ethylene and Propylene. Methane is converted into synthesis gas. Synthesis gas is a mixture of carbon monoxide & hydrogen which is used to make ammonia & methanol. Ammonia is used to make Urea and Methanol is used to make acetic acid and derivatives. Consumption of naphtha in petrochemical sector has increased from 9412 thousand tonne in 2012-13 to 10362 thousand tonne in 2017-18. Off take of natural gas for petrochemical sector has increased from 2486 million standard cubic meter to 4024 million standard cubic meter during the same period.

13. Olefins and Fibre Intermediates (Acrylonitrile, Caprolactum, Mono Ethylene Glycol, Purified Terephthalic Acid, Dimethyl Terephthalate) form the basis of the *petrochemical industries*. Olefins and Aromatics are used in producing Fibre Intermediates. Salt is the feed stock for the chlor-alkali chemical industry, just as crude oil and Natural Gas for the petrochemical industry. Salt, Aromatics, Minerals (Limestone, Bauxite ore (Aluminium), Rock Phosphate, Sulphur, Iron ore, Indium ore (Tin), Chromite ore, Mica, Silica, Manganese ore, etc) and Basic metals (Copper, Zinc, Titanium, Aluminium, Iron, Chromium, Tin, Nickel, etc) form the basis of *chemical industries* producing Chlor-Alkali, Organic Chemicals, Inorganic Chemicals, Pesticides and Dyes & pigments. Dyes are organic compounds and are mainly based on Benzene, Toluene, Naphthalene (from petroleum fractions and coke oven batteries of steel plants), Anthracene and Cyanuric Chloride. Pesticides are mainly based on Benzene, Naphthalene, Phosphorous (produced from phosphate rock) and Sulphur. Pharmaceuticals are mainly based on Benzene, Toluene and Xylene.

14. There are two naphtha, two gas based and seven dual feed cracker complexes in the country with a combined annual ethylene capacity of 7.27 million MT.

15. Innovations in additives, alloys, blends, compounds, composites and high grade reinforcement materials such as glass, nano-clays, carbon nano-tubes and carbon fibres require attention for technology development. New developments in the field of bio and photodegradable plastics, are also taking place all over the world. The chemical and petrochemical industries face the challenge to operate in an environmentally acceptable manner. Chemicals are globally tradable and unless chemicals produced in India are cost effective, these cannot contribute usefully to the Nation's economy. With an eye on emerging usages, research and development efforts may focus on the

need to modernize and upgrade the existing manufacturing processes, improve the quality of existing products and make them safe for environment and human health.

16. Commissioning of new installed Capacity

Reliance industries are expected to commence commercial production of Iso Butylene Isoprene Rubber (IIR)/Halo Butyl Rubber (HBR) by June 2019, which will be import substitution activity.

17. According to the National Sample Survey Office (NSSO)'s latest survey (July 2015-June 2016 NSS 73rd round), 3.72 lakh persons were engaged in Unincorporated Chemicals and Chemical Products Sector (Industry Division 20) while 3.6 crore persons engaged in Unincorporated Manufacturing sector. There is around 1.73 lakh Unincorporated Enterprises in Chemicals and Chemical Products Sector (Industry Division 20) industries while 1.97 crore Unincorporated Enterprises in Manufacturing sector.

Chapter 5

National Industrial Classification (NIC) - A Digest

The Central Statistics Office under the Ministry of Statistics & Programme Implementation being nodal Statistical Authority in the Country is vested with the responsibility of setting up Standards for collection, compilation and dissemination of Statistical data. The Official statistics is required to be collected and presented according to classification designed to facilitate its use for National Economic Policies and conform to International comparison. The need for comparability of Statistics available from various sources, on different aspects of the economy and usability of such data for economic analysis necessitated the need of standardization of a system of classification.

CSO being responsible for coordination of statistical activities in the country and with a view to evolve and maintain statistical standards initiated task of bringing out Standard Industrial Classification as early as in 1960 and evolved a Standard Industrial Classification (SIC) in 1962. To take care of emerging changes in Organizations and Structure of Industries, the need for revision of this document was felt from time to time. The subsequent versions of this document were brought out by CSO as NIC- 70, NIC- 87 and NIC- 1998. It is during 1998 that 4-digit system of International Standard Industrial Classification (ISIC- 3) was followed in toto and these 4 digits were extended up to 5 digits based on national needs. Consequent upon release of United Nations International Standard Industrial Classification (ISIC) – 2002 Rev. 3.1, NIC- 1998 was updated to bring out NIC – 2004. After adoption of ISIC Revision-4 by the United Nations Statistical Commission (UNSC) in the year 2008, an expert committee under the chairmanship of DG, CSO deliberated on the issues and approved the draft NIC - 2008 incorporating revision in NIC- 2004 consistent with ISIC revision 4.

Basic features of NIC 2008

All the activities are grouped into several “activity groups” or “tabulation categories” in a hierarchical manner. Activities are first grouped into ‘section’ alphabetically coded from A through U, every section is divided into ‘division’ with 2-digit numeric code, every division into ‘group’ with 3-digit numeric code, every group into ‘class’ with 4-digit numeric code and every 4-digit class into 5-digit ‘sub-class’. The structure is illustrated below.

Level		Description
Section		Manufacturing
Division 20		Manufacture of Chemicals and Chemical Products
Group	201	Manufacture of Basic Chemicals, Fertilizer and Nitrogen Compounds, Plastics and Synthetic Rubber in Primary Forms
	203	Manufacture of man-made fibres
Class	2011	Manufacture of Basic Chemicals
	2030	Manufacture of man-made fibres
Sub-Class	20111	Manufacture of liquefied or compressed inorganic industrial or medical gases (elemental gases, liquid or compressed air, refrigerant gases, mixed industrial gases etc.)
	20301	Manufacture of synthetic or artificial filament tow

The structure of NIC-2008 is identical to the structure of ISIC Revision up to 4-digit level 'class'. Classes were then divided into 5-digit 'sub classes' according to national requirements.

Salient features of NIC-2008

- The sections A to Q of NIC-2004 have been replaced by sections A to U in respect of NIC-2008. NIC-2008 has 21 sections, 88 divisions, 238 groups, 403 classes and 1304 sub-classes.
- NIC-2008 is comparable with ISIC Rev.4 till 4-digit classes in totality.
- The concept of shadow classes introduced in NIC-2004 has been done away with in NIC- 2008 as the emphasis has been given on activity rather than type of operation and scale of operation.
- In NIC-2008 some of the 5-digit sub-classes of NIC-2004 have been made separate 4-digit classes e.g. 'Growing of Sugarcane (01115)', 'Growing of tobacco (01114)', 'Growing of fibre crops (01113)' 'Growing of flowers (01122)''.
- Repair and installation of machinery and equipment has been classified as separate division (Division-33) in NIC-2008.
- Repair of Personal Household goods (5260 of NIC-2004) has been removed from Section-G (wholesale and retail trade; repair of motor vehicles and motor cycles) and now included in Section-S (other service activities).
- Publishing activity which was included in division-22 of manufacturing section in NIC-2004 is now included in division-58 (publishing activities) of NIC-2008 under Section-J (information and communication).
- Activity 'water supply' under division-41 (Electricity, Gas and Water Supply) of NIC-2004 is now included in Section-E (water supply; sewerage, waste management and remediation activities).
- Explanatory notes of ISIC Rev.4 at 1/2/3-digit level have been incorporated in NIC-2008 as Annexure for better understanding of the revised classification.

- Under 4-digit classes of NIC-2008, inclusion and exclusion statements have been included in the detailed structure itself to remove ambiguity in the scope of classification and to facilitate the classification of economic activity distinctly.

Division 20 and 21 of NIC -2008 relates to “Chemical and Chemical Products” and “Pharmaceutical, Medicinal and botanical products” respectively.

Chapter 6

Indices released by Government of India

Indices are important economic indicators to demonstrate the relative change in the parameters over a specified period of time. Some of the important indices compiled and released by different Departments under the Government of India along with their inception and uses in different sectors of economy are summarized below:

- A. Index of Industrial Production (IIP)
- B. Consumer Price Index (CPI)- Industrial Worker, Agricultural Labourer / Rural Labourer , Rural /Urban/ Combined
- C. Wholesale Price Index (WPI)

A. Index of Industrial Production-(IIP)

1. The Central Statistics Office (CSO), Ministry of Statistics and Programme Implementation Compiles and brings out an index of Industrial Production. CSO revises the base year of the macroeconomic indicators, as a regular exercise, to capture structural changes in the economy and improve the quality and representativeness of the indices. In this direction, the base year of the all-India Index of Industrial Production (IIP) has also been revised from 2004-05 to 2011-12 to not only reflect the changes in the industrial sector but to also align it with the base year of other macroeconomic indicators like the Gross Domestic Product (GDP), Wholesale Price Index (WPI).
2. IIP in the revised series will continue to represent the Mining, Manufacturing and Electricity sectors. The revised series uses the National Industrial Classification (NIC) 2008 for the purpose of classification of industrial production. 15 source agencies are providing production data for Index of Industrial Production (IIP) base year 2011-12.

Summary of Source Agencies of IIP in the new series with base 2011-12

SI No	Source	Weights (%)
1	Department of Industrial Policy and Promotion (DIPP)	47.54
2	Indian Bureau of Mines	14.37
3	Ministry of Petroleum & Natural Gas	11.29
4	Joint Plant Committee	10.52
5	Central Electricity Authority	7.99

12	Tea Board	0.29
13	Railway Board	0.13
14	Office of Jute Commissioner	0.07
15	Coffee Board	0.04
GENERAL		100.00

3. Highlights of the changes in New Series of Index of Industrial Production are summarized below:

- a. The selection of items in the new series has been done at the 3 digit level of NIC for better representation as compared to selection at 2 digit level done in 2004-05 series.
- b. At the broad level, the new series has a total of 809 items occurring in the manufacturing sector in the item basket (405 item groups), where 149 new items like Steroids and hormonal preparations, Cement clinkers, Medical/ surgical accessories, Pre-fabricated concrete blocks, refined Palm Oil have been added and 124 items such as Biaxially Oriented Polypropylene (BOPP) Films, Calculators, Colour TV picture tubes, Gutka have been deleted from the 2004-05 series which had 620 items(397 item groups)in the manufacturing sector. The sectoral composition of the IIP is as follows:

Sector	Base year 2011-12		Base year 2004-05	
	Weights (%)	Item groups	Weights (%)	Item groups
Mining	14.373	1	14.157	1
Manufacturing	77.633	405	75.527	397
Electricity	7.994	1	10.316	1
Total	100	407	100	399

- c. To reflect the increasing significance of electricity generation from renewable sources, it has been decided to include data on electricity generation figures from these sources in the new series. This inclusion is being done from April, 2014 onwards as monthly data for electricity generation from renewable sources for earlier months were not available.
- d. For capital goods, data in the new series will now be captured in terms of ‘work in progress’ to better represent the growth of capital goods and to avoid reporting of production figures in bulk after the completion of production. Details on this methodology are available in the Report of the Working Group set up for the revision of base year, which may be accessed in the official website of this Ministry.
- e. The number of source agencies reporting data for compilation of IIP in the new series will be 14 as compared to 15 in the current series. This is on account of the fact that data on ‘Iodised Salt’ in the new series will be provided by the Department of Industrial Policy and Promotion (DIPP) as O/o Salt Commissioner is not in a position to supply Salt production data after abolition of Salt Cess Act, 1953 in Finance Bill 2016.
- f. In the Mining Sector the coverage has undergone a change on account of the MCDR Amendment Rules, 2016 resulting in 27 non-metallic minerals being designated as minor minerals and which are no longer monitored by Indian Bureau of Mines.

B. Consumer Price Index (CPI)

1. A Consumer Price Index (CPI) is designed to measure the changes over time in general level of retail prices of selected goods and services that households purchase for the purpose of consumption. Such changes affect the real purchasing power of consumer's income and their welfare. CPI numbers are widely used as macroeconomic indicator of inflation, and also as a tool by government and central banks for targeting inflation and monitoring price stability. CPI is also used as deflators in the National Accounts. Therefore, CPI is considered as one of the most important economic indicators.
2. Different types of CPIs, namely, CPI (IW), CPI (AL/RL), CPI (UNME) and CPI (R/U/C) compiled by different agencies of Govt. of India, are available for users in our country. First three indices, including CPI (UNME), are specific to population segments. The price collection for CPI (UNME) was discontinued with effect from April 2008 and linked all India CPI (UNME) numbers were brought out from April 2008 to December 2010. The fourth one i.e. CPI (R/U/C) is for general population, sector-wise, to be explained in subsequent paragraphs.

3. Salient features of different types of CPIs:

Consumer Price Index for Industrial Workers - CPI (IW)

This index is compiled by the Labour Bureau, Ministry of Labour and Employment. The target population is working class family, defined as a family: (i) located within the center for industrial worker, (ii) has at least one member working as manual worker in an establishment in any of the seven sectors of employment covered viz., factories, plantations, mining, ports and docks, public motor transport undertakings, electricity generating and distributing establishments, and railways; and (iii) derived 50 per cent or more of its income during the calendar month preceding the day of enquiry through any manual work.

The present series of CPI (IW) is on base 2001=100. The weighting diagrams for the purpose of compilation of index numbers had been derived on the basis of average monthly family expenditure of the working class obtained from the Working Class Family Income Expenditure Survey conducted during 1999-2000.

The CPI (IW) is released every month (on the last working day of the following month) for each of the selected 78 centers as well at all India level. It is mainly used for the determination of Dearness Allowance (DA) being paid to Central/State Government employees and also to the workers in the industrial sectors, besides fixation and revision of minimum wages in scheduled employments. It is also used in moving the base year poverty lines for urban areas to the subsequent years.

**The base of the index is being revised to 2015=100 to replace the existing base of the index.*

Consumer Price Index for Agricultural /Rural Labourers - CPI (AL/RL)

These indices are compiled by the Labour Bureau, Ministry of Labour and Employment. The target populations are agricultural and rural labourers. A rural labour household is defined as one, which derives major income from manual employment (rural labour) during the last 365 days. From amongst the rural labour households, those households, which earn 50% or more of their total income from gainful employment as manual labour in agriculture during the last 365 days, are categorized as agricultural labour households. Agricultural labour households form a major subset of rural labour households. A person is considered engaged in agricultural labour if he/she follows one or more of the agricultural occupations in the capacity of wage paid manual labourer, whether paid in cash or kind (excluding exchange labour) or both. A person who does manual work in return for wages in cash or kind or partly in cash and partly in kind (excluding exchange labour) is a wage paid manual labourer. Persons who are self-employed doing manual work are not treated as wage paid manual labourers. People living in rural areas and engaged in manual labour by working in agricultural and/or non-agricultural occupations in return for wages paid either in cash or kind (excluding exchange labour) or both, are considered as rural labourers. Thus, rural labourers include both agricultural and other labourers.

The present series of CPI (AL/RL) is on base 1986-87=100. Estimates of average consumer expenditure per household generated from the results of the NSS 38th round (1983), CES formed the source of weights for different items of goods and services, used in compilation of CPI (AL) and CPI (RL).

For both the current series of CPI (AL) and CPI (RL), the retail prices in respect of goods and services are collected on monthly basis, from fixed markets in 600 sample villages in 20 states by the field workers of the Field Operations Division (FOD) of the National Sample Survey Office (NSSO). The various items (12) of goods and services are categorized into four main groups namely, (i) Food, (ii) Fuel and Light, (iii) Clothing, Bedding and Footwear; and (iv) Miscellaneous. The items of goods and services are common for the state as a whole but the varieties of most of the items differ from village to village. The collection of retail prices is staggered over four weeks of a month with one-fourth of the sample covered every week.

The CPI (AL/RL) is released every month (20th or preceding working day of the following month) for each of the selected states as well at all India level. It is mainly used for the determination/ fixation and revision of minimum wages in agricultural sector. CPI (AL) is also used in moving the base year poverty lines for rural areas to the subsequent years.

Consumer Price Index for Rural, Urban and Combined - CPI (R/U/C)

The indices are compiled by the CSO on base 2010 = 100. The consumption patterns (weighting diagrams) for this series of CPI have been derived on the basis of average monthly consumer expenditure of an urban/rural household obtained from the results of the 61st Round of CES conducted by the National Sample Survey Office during 2004-05.

C. Wholesale Price Index (WPI)

WPI is an important measure to monitor the dynamic movement of prices at the wholesale level. In a dynamic world, prices keep on changing. WPI is used as a deflator of various nominal macroeconomic variables including Gross Domestic Product (GDP). The WPI based inflation estimates also serve as an important determinant, in formulation of trade, fiscal and other economic policies by the Government. WPI is also used for the purpose of escalation clauses in the supply of raw materials, machinery and construction work. Business firms in search of effective methods for coping with changes in prices often employ price adjustment (escalation) clauses in long-term sales and purchase contracts. WPI is widely recognized among business people, economists, statisticians, and accountants as a useful objective indexing tool in price adjustment clauses.

The base year of All-India WPI has been revised from 2004-05 to 2011-12 by the Office of Economic Advisor (OEA), Department of Industrial Policy and Promotion, Ministry of Commerce and Industry to align it with the base year of other macroeconomic indicators like the Gross Domestic Product (GDP) and Index of Industrial Production (IIP). The Wholesale Price Index (WPI) series in India has undergone six revisions in 1952-53, 1961-62, 1970-71, 1981-82, 1993-94 and 2004-05 so far. The current series is the seventh revision.

New Features of WPI

- In the new series of WPI, prices used for compilation do not include indirect taxes in order to remove impact of fiscal policy. This is in consonance with international practices and will make the new WPI conceptually closer to 'Producer Price Index'.
- A new "WPI Food Index" will be compiled to capture the rate of inflation in food items.
- Seasonality of fruits and vegetables has been updated to account for more months as these are now available for longer duration.
- Item level aggregates for new WPI are compiled using Geometric Mean (GM) following international best practice and as is currently used for compilation of All India CPI.
- A high level Technical Review Committee has been set up for the first time to carry out dynamic review process in order to keep pace with the changing structure of the economy.

(\$) : Includes capacity of all the units producing PFY, NFY, NIY and PPFY under broadbanding as Synthetic Filament Yarn : * Includes capacity with Nylon 6, 66

(\$\$) : Independent capacity of units producing only NFY, NIY and PPFY.

As the capacities of these products are also included in Synthetic Filament yarn, capacity utilisation can not be worked out.

(\$\$\$) : Combined capacity to produce both LLDPE and HDPE and hence capacity utilisation can not be worked out. However production is independent.

(**) : Combined capacity of 2-EH, Butanol & Iso Butanol is given under 2 - EH

Note : 1. Production and Installed Capacity data based on MPR received from large and medium scale units only.
